ABOUT SPEAK

SPEAK, or Speech Potential Enhanced through Applied Knowledge, is an online platform accessible to its targeted end users, which are adults with dysarthria. It aims to provide exercises or practices leading to improvement of the patients' speech. By using evidence-based techniques, SPEAK empowers users to take control of their speech rehabilitation journey in a convenient, virtual setting.

At SPEAK, insights and knowledge from Professional Speech Language Pathologists (SLPs) are highly valued and incorporated in the whole website development process. Through this collaboration, their expertise ensures that the platform provides scientifically-backed, effective strategies for managing dysarthria.

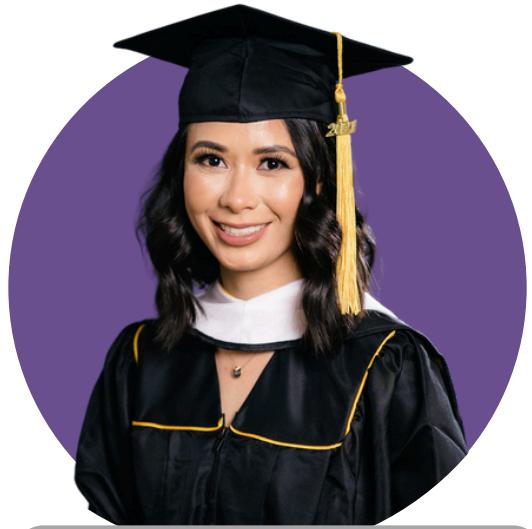

SPEAK also offers valuable resources for caregivers, ensuring they are equipped to support the patient's progress at home. These resources offer guidance on how to implement at-home practices, foster a supportive environment, and address challenges that may arise during the rehabilitation process.

DYSARTHRIA COUNSELING FOR FAMILIES

Holistic care for dysarthria involves more than just SPEAK. Cooperation from the patient's family and environment is crucial, and proper at-home care that supports their dysarthria journey is essential for demonstrating progress. There will be online courses and seminars accessible for the families regarding these topics.
